Key Concepts in Primary Science Vivian Cooke, Colin Howard, 2025-02-28 This is essential reading for all primary science trainee and beginning teachers who want to strengthen their science subject knowledge Each chapter tackles a major theme of the new national curriculum and breaks it down into key concepts For each concept there is a detailed audit to help readers identify their current levels of knowledge and understanding along with areas for development This is followed by concise definitions key terminology detailed examples and in practice ideas to clearly relate theory to classroom practice Finally readers are invited to re check their understanding and assess their level of competence at the end of each section The text enables teachers to feel secure in their subject knowledge and confident about effectively conveying that information to their pupils through appropriate subject specific pedagogy

Accessing Series Science - 5 (9-10) - Teacher Book Christine Moorcroft, 2005-02 Contains a complete package of resources for teaching science and includes a separate Teacher resource book accompanied by a colour photobook The resource book also contains a range of photocopiable activity sheets

Reproductive Ecology of Flowering Plants: A Manual K.R. Shivanna, Rajesh Tandon, 2014-09-01 Successful reproduction is the basis not only for the stability of the species in their natural habitat but also for productivity of our crop plants Therefore knowledge on reproductive ecology of wild and cultivated plants is important for effective management of our dwindling biodiversity and for the sustainability and improvement of the yield in crop species Conservation and management of our plant diversity is going to be a major challenge in the coming decades particularly in the tropical countries which are rich in biodiversity Reproductive failure is the main driver for pushing a large number of tropical species to vulnerable category Available data on reproductive ecology on tropical species is very limited and there is an urgent need to initiate research on these lines A major limitation for the beginners to take up research is the absence of simple concise work manuals that provide step wise procedures to study all aspects of reproductive ecology The Manual fills this void Over 60 protocols described in the manual cover the whole spectrum of reproductive ecology study sites and species phenology floral morphology and sexuality pollen and pistil biology pollination ecology breeding system seed biology seed dispersal and seedling recruitment Each chapter gives a concise conceptual account of the topic before describing the protocols The Manual caters to researchers teachers and students who are interested in any aspect of reproductive ecology of flowering plants botanists ecologists agri horticulturists foresters entomologists plant breeders and conservation biologists
