

## Genetics Practice Problems: Pedigree Tables

Remember the following when working pedigree tables:

- 1. Circles are females and squares are males.
- 2. A shaded circle or square indicates that a person has the trait.

The pedigree chart below is the inheritance of color blindness. Shaded individuals are colorblind. First, determine the probable genotype of person 1-15. Then answer the questions below the table.

What do you know about the genotype of the mother 1-1?

These people (1-1) had a color blind son (1-2). His dad is normal, his color blind mom, from his mother. Since the mother is not shaded she must be a carrier.

Number 1-3 is colorblind just like his father. Where could he get his allele for colorblindness?

Yes, he must have his allele for colorblindness from his mother. Must have been that 1-1 is a carrier. From their father.

Number numbers 1-4 and 1-5 were colorblind. How did they have a colorblind son (1-6)?

That mother must be a carrier for color blindness.

What must be the genotype of the parents of a colorblind daughter? Explain.

To have a color blind daughter, she must have the recessive allele from each parent. Her father must be  $X^c Y$  and mother must have to be  $X^c X^c$ .

If mother 1-8 has a normal son, what is the probability that their son will be colorblind?

$X^N X^c \times X^c Y \rightarrow$  all of their sons will be color blind.

(Carrier) (normal)
