Autosomal Recessive Disorders

Autosomal recessive disorders are caused by the presence of **2 recessive alleles**. Because these alleles are on **autosomes**, the disorders are equally as common in males and females.

Recessive disorders can seem to appear out of nowhere because both parents can be normal and have a child with the disease if the parents are carriers. A **carrier** doesn't show the phenotype because they have a dominant allele to mask the recessive allele that they "carry" and can pass along to their offspring. If two carriers have a child, their child has a 25% chance of getting the disorder.

Examples of autosomal recessive disorders include **Cystic Fibrosis** and **PKU**.
