Digital Knowledge Maps in Education Dirk Ifenthaler, Ria Hanewald, 2013-11-01 Digital knowledge maps are at a glance visual representations that enable enriching imaginative and transformative ways for teaching and learning with the potential to enhance positive educational outcomes The use of such maps has generated much attention and interest among tertiary education

practitioners and researchers over the last few years as higher education institutions around the world begin to invest heavily into new technologies designed to provide online spaces within which to build resources and conduct activities. The key elements of this edited volume will comprise original and innovative contributions to existing scholarship in this field with examples of pedagogical possibilities as they are currently practiced across a range of contexts. It will contain chapters that address theory research and practical issues related to the use of digital knowledge maps in all aspects of tertiary education and draws predominantly on international perspectives with a diverse group of invited contributors. Reports on empirical studies as well as theoretical conceptual chapters that engage deeply with pertinent questions and issues raised from a pedagogical, social, cultural, philosophical and/or ethical standpoint are included. Systematic literature reviews dealing with digital knowledge mapping in education are also an integral part of the volume.

Thematic-Pattern-Based "Concept + Language Mapping" (CLM) Peichang He, 2025-05-19. This book explores the issue of integration in content and language integrated learning (CLIL) and addresses the need for effective content and language integration by proposing the thematic pattern-based Concept Language Mapping (CLM) approach. Peichang He explores effective integration of content and language learning during the instruction of content subjects using students' additional language as the medium of instruction. The volume introduces the contextual background of a large-scale school-university collaboration CLIL research project and builds the conceptual framework of a thematic pattern-based CLM pedagogy by drawing on the language-based theory of learning (Halliday, 1993), the construct of thematic patterns (Lemke, 1990), and the recent development of genre-based pedagogy (Lin, 2016; Rose, Lemke, Lin, 2019) and proposes a transdisciplinary plurilingual thematic pattern-based CLM approach. The book concludes with a discussion on some promising future research orientations, including a transdisciplinary plurilingual thematic pattern-based CLM approach for CLIL sustainability, catering for learner diversity in CLIL and teacher professional development in thematic pattern-based CLM practice. The book shows readers the design of CLM materials and activities which are demonstrated through classroom interactions in lessons of different subjects and grades for students of diverse cognitive abilities and linguistic backgrounds. This insightful volume will be of interest to researchers and trainee teachers exploring pedagogical approaches to CLIL, plurilingual and transdisciplinary education and will provide pedagogical implications for teachers of both language and content subjects in schools worldwide.
