The Complacent Class Tyler Cowen, 2017-02-28 A Wall Street Journal and Washington Post Bestseller Tyler Cowen's blog Marginal Revolution is the first thing I read every morning And his brilliant new book The Complacent Class has been on my nightstand after I devoured it in one sitting I am at round the clock Cowen saturation right now Malcolm Gladwell Since Alexis de Tocqueville restlessness has been accepted as a signature American trait Our willingness to move take risks and adapt to change have produced a dynamic economy and a tradition of innovation from Ben Franklin to Steve Jobs The problem according to legendary blogger economist and best selling author Tyler Cowen is that Americans today have broken from this tradition we're working harder than ever to avoid change We're moving residences less marrying people more like ourselves and choosing our music and our mates based on algorithms that wall us off from anything that might be too new or too different Match.com matches us in love Spotify and Pandora match us in music Facebook matches us to just about everything else Of course this matching culture brings tremendous positives music we like partners who make us happy neighbors who want the same things We're more comfortable But according to Cowen there are significant collateral downsides attending this comfort among them heightened inequality and segregation and decreased incentives to innovate and create The Complacent Class argues that this cannot go on forever We are postponing change due to our near sightedness and extreme desire for comfort but ultimately this will make change when it comes harder The forces unleashed by the Great Stagnation will eventually lead to a major fiscal and budgetary crisis impossibly expensive rentals for our most attractive cities worsening of residential segregation and a decline in our work ethic The only way to avoid this difficult future is for Americans to force themselves out of their comfortable slumber to embrace their restless tradition again

The Human City Joel Kotkin, 2016-04-12 The author of *The Coming of Neo Feudalism* and *The New Class Conflict* challenges conventions of urban planning Around the globe most new urban development has adhered to similar tenets tall structures small units and high density In *The Human City* Joel Kotkin called America's uber geographer by David Brooks of the New York Times questions these nearly ubiquitous practices suggesting that they do not consider the needs and desires of the vast majority of people Built environments Kotkin argues must reflect the preferences of most people even if that means lower density development *The Human City* ponders the purpose of the city and investigates the factors that drive most urban development today Armed with his own astute research a deep seated knowledge of urban history and a sound grasp of economic political and social trends Kotkin pokes holes in what he calls the retro urbanist ideology and offers a refreshing case for dispersion centered on human values This book is not anti urban but it does advocate a greater range of options for people to live the way they want at all stages of their lives Praise for *The Human City* Kotkin presents the most cogent evidence based and clear headed exposition of the pro suburban argument In pithy readable sections each addressing a single issue he debunks one attack on the suburbs after another But he does more than that He weaves an impressive array of original observations about cities into his arguments enriching our understanding of what cities are about and what they can and must become Shlomo Angel Wall Street Journal The most eloquent expression of urbanism since Jane Jacobs's *The Death and Life of Great American Cities* Kotkin writes with a strong sense of place he recognizes that the geography and traditions of a city create the contours of its urbanity Ronnie Wachter Chicago Tribune

Rationalizing Rural Area Classifications for the Economic Research Service National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, 2016-02-05 The U S Department of Agriculture Economic Research Service USDA ERS maintains four highly related but distinct geographic classification systems to designate areas by the degree to which they are rural The original urban rural code scheme was developed by the ERS in the 1970s Rural America today is very different from the rural America of 1970 described in the first rural classification report At that time migration to cities and poverty among the people left behind was a central concern The more rural a residence the more likely a person was to live in poverty and this relationship held true regardless of age or race Since the 1970s the interstate highway system was completed and broadband was developed Services have become more consolidated into larger centers Some of the traditional rural industries farming and mining have prospered and there has been rural amenity based migration Many major structural and economic changes have occurred during this period These factors have resulted in a quite different rural economy and society since 1970 In April 2015 the Committee on

National Statistics convened a workshop to explore the data estimation and policy issues for rationalizing the multiple classifications of rural areas currently in use by the Economic Research Service ERS Participants aimed to help ERS make decisions regarding the generation of a county rural urban scale for public use taking into consideration the changed social and economic environment This report summarizes the presentations and discussions from the workshop

The Coming of Neo-Feudalism Joel Kotkin, 2023-01-10 Following a remarkable epoch of greater dispersion of wealth and opportunity we are inexorably returning towards a more feudal era marked by greater concentration of wealth and property reduced upward mobility demographic stagnation and increased dogmatism If the last seventy years saw a massive expansion of the middle class not only in America but in much of the developed world today that class is declining and a new more hierarchical society is emerging The new class structure resembles that of Medieval times At the apex of the new order are two classes a reborn clerical elite the clerisy which dominates the upper part of the professional ranks universities media and culture and a new aristocracy led by tech oligarchs with unprecedented wealth and growing control of information These two classes correspond to the old French First and Second Estates Below these two classes lies what was once called the Third Estate This includes the yeomanry which is made up largely of small businesspeople minor property owners skilled workers and private sector oriented professionals Ascendant for much of modern history this class is in decline while those below them the new Serfs grow in numbers a vast expanding property less population The trends are mounting but we can still reverse them if people understand what is actually occurring and have the capability to oppose them

Redesigning Manufacturing M. Beverland, B. Nielsen, V. Pryce, Ellen Hellmann, 2015-05-13 Manufacturing in the UK has an image problem Although this image problem is more fiction than fact it nonetheless has an impact on the sector's ability to attract staff capital and policy interest This book redresses this situation by focusing on the real successes of the sector and the strategies used by makers to achieve sustainable results *Understanding Urban Cycling* Justin Spinney, 2020-10-28 Academic interest in cycling has burgeoned in recent years with significant literature relating to the health and environmental benefits of cycling the necessity for cycle specific infrastructure and the embodied experiences of cycling Based upon primary research in a variety of contexts such as London Shanghai and Taipei this book demonstrates that recent developments in urban cycling policy and practice are closely linked to broader processes of capital accumulation It argues that cycling is increasingly caught up in discourses around smart cities that emphasise technological solutions to environmental problems and neoliberal ideas on individual responsibility and bio political conduct which only results in solutions that prioritise those who are already mobile Accordingly the central argument of the book is not that the popularisation of cycling is inherently bad but that the manner in which cycling is being popularised gives cause for social and environmental concern Ultimately the book argues that cycling has now become a vehicle for sustaining pro growth agendas rather than subverting them or shifting to sustainable no growth de growth and less technologically driven visions of modernity This book makes an innovative contribution to the fields of Cycling Studies Mobilities and Transport and will be of interest to students and academics working in Human Geography Transport Studies Urban Studies Urban Planning Public Policy Sociology and Sustainability *The Real College Debt Crisis* William Elliott III, Melinda K. Lewis, 2015-07-14 Is it still worth it for low income students to attend college given the debt incurred This book provides a new framework for evaluating the financial aid system in America positing that aid must not only allow access to higher education but also help students succeed in college and facilitate their financial health post college Higher education plays a critical role in the economy and society of the United States creating a ladder of economic opportunity for American children especially for those in poverty Unfortunately higher education today increasingly reinforces patterns of relative privilege particularly as students without the benefit of affluent parents rely more and more on student loans to finance college access This book presents penetrating new information about the fiscal realities of the current debt based college loan system and raises tough questions about the extent to which student loans can be a viable way to facilitate equitable access to higher education The book opens with relevant parts of the life stories of two students one who grew up poor and had to take on high amounts of student debt and another whose family could offer financial help at critical times These real life examples provide invaluable insight into the student debt problem and help make the complex data more understandable A wide range of readers from scholars of poverty social policy and educational equality to policymakers to practitioners in the fields of student financial aid and financial planning will find the information in this text invaluable **Maritime Mobilities** Jason

Monios, Gordon Wilmsmeier, 2017-12-01 The central concerns of mobilities research exploring the broader context and human aspects of movement are fundamental to an understanding of the maritime freight transport sector Challenges to the environment attempts at more sustainable practices changes in the geoeconomic system political power labour economic development and governance issues are all among the topics covered in this book The aim of this volume is to address issues of maritime transport not only in the simple context of movement but within the mobilities paradigm The goal is to examine negative system effects caused by blockages and inefficiencies examine delays and wastage of resources identify negative externalities explore power relations and identify the winners and losers in the globalised trade system with a particular focus on the maritime network Maritime Mobilities therefore aims to build a bridge between traditional maritime academic approaches and the mobilities paradigm This volume is of great importance to those who study industrial economics shipping industries and transport geography
