

OPERATION

The TX1500 automatically displays the current time and the room temperature. It also displays the day of the week and the currently active program period that is controlling the temperature: MORNING, DAY, EVEN, or NIGHT.

The set point temperature will appear in the right side of the display. In this window, set the system switch to HEAT to control your heating system. In the summer, set the switch to COOL to control your air conditioner. In spring and fall or when windows are open, you can set the system switch OFF.

Setting the FAN switch to AUTO automatically runs your system's fan during heating and cooling. Setting the FAN switch to ON runs your system's fan continuously even without heating or cooling.

This thermostat is "universal programmable". You can make any program or setting changes with the thermostat body either on the wall thermostat base.
