Telescope Jack

The Telescope Jack is used to provide tracking signals to the telescope drive. Viewed from outside the camera, looking in, it has the following pin-out:

The *Left*, *Down*, *Up* and *Right* signals are driven from optically isolated photo transistors that conduct when telescope movement is desired. They can sink up to 25ma and can hold off up to 25V.

If what you are plugging into is voltage based you'll need an external pull-up resistor. The *Common* signal is connected to the common on the four photo- transistors.
