

Subtraction Detectives: Missing Numbers

Third Grade

Math

In this lesson, students must become detectives to solve for the missing number in each subtraction problem. They will develop and use their powers of mathematical reasoning using number bonds to find differences.

Learning Objectives

Students will be able to determine the missing numbers in a subtraction problems (minuends and subtrahends).

Materials and preparation

- Class set of the [Solve for Missing Numbers](#) worksheet
- Whiteboard, chart paper or projector
- Student white boards or notebooks

Attachments

- [Solve for Missing Numbers \(PDF\)](#)

Introduction (5 minutes)

- Draw a number bond on the board with the number 5 in the large circle and number 2 in one of the smaller circles.
- Ask students to turn and talk to a neighbor about what number they think goes in the other circle.
- Take responses from the students. Ask them to share their reasoning. Record strategies on a piece of chart paper.
- Now do the same process with 12 in the large circle and 10 in one of the smaller circles, giving time to discuss, share, and explain their thinking. Add any new strategies to chart paper.
- Explain that the thinking they are using now will come in handy as they learn to find missing numbers in a subtraction problem.

Explicit Instruction/Teacher modeling (10 minutes)

- Pass out individual student whiteboards or have students work in math notebooks.
- Do another example like the ones you just did with the number 40 in the large circle and 25 in the smaller circle. Discuss and share.
- It is important that students see that the same logic and strategies can be applied even as the numbers get bigger.
- Generate more two digit examples if students additional more practice.

Guided Practice (10 minutes)

- Now provide a three-digit example with the number 156 in the larger circle and 45 in the smaller circle. Have students do this three-digit example with a partner if they are unsure. Share and discuss reasoning and strategies as a class, noting that the same strategies can be applied as were used with simpler

Soul Numbers Michelle Arbeau, 2014-07-01 Is it just a coincidence that a record number of people are seeing in numbers or could it be the fabric of the universe revealing itself to us According to the religion of Kabbalah and even the ancient Greek philosopher and mathematician Pythagoras the truths of the universe are contained within numbers The phenomena of numbers seeing repeating numbers and number sequences are sweeping the globe People from the average Joe to celebrities are seeing repeating numbers on clocks in addresses in phone numbers in account numbers and on license plates just to name a few Repeating numbers and number sequences are showing up in both the quirky and the commonplace on a daily basis Skeptics argue that seeing repeating numbers is simply a matter of pattern recognition and it's all in our head There have been scientific theories throughout history that attempt to explain the basis of the universal structure from String Theory to the Holographic universe All things in existence can be counted sorted or measured using numbers and intriguingly a common thread in many theories is mathematics More people are reporting the same phenomena in all cultures races and religions turning skeptics into believers Soul Numbers has the potential to create a tidal wave amid this numbers phenomenon making it the new most complete numbers meaning bible Numerology books offer some insight into the base number meanings of 0 to 9 but fail to go further to precisely pinpoint and explain why someone is seeing 147 on a clock daily and what it means to them Covering the number meanings from 0 to 999 Soul Numbers helps readers decipher any number sequence Whether they're seeing single 2s everywhere or exactly four 2222 it will allow them

to break the numbers down like an ancient code Unlike other titles with mainly angelic focused number meanings this book holds a broad spectrum view of number patterns weaving science and spirituality to spark the curiosity of both the skeptic and the die hard spiritualist **Targeting Maths for Victoria** Garda Turner, Gloria Harris, 2006
