

A shirtless man with dark, wet hair and a somber expression is the central figure. His right shoulder and upper arm are covered in fresh, dripping blood. The background is a dark, snowy night scene with faint, glowing red lights and snowflakes. The overall mood is dark and ominous.

Alternative medicine AM is hugely popular about 40% of the US general population have used at least one type of alternative treatment in the past year and in Germany this figure is around 70% The money spent on AM is considerable the global market is expected to reach nearly US 200 billion by 2025 with most of these funds coming directly out of consumers pockets The reasons for this popularity are complex but misinformation is certainly a prominent factor The media seem to have an insatiable appetite for the subject and often report uncritically on it Misinformation about AM on the Internet currently about 50 million websites are focused on AM is much more the rule than the exception Consumers are thus being bombarded with misinformation on AM and they are ill protected from such misinformation and therefore prone to making wrong unwise or dangerous therapeutic decisions endangering their health and wasting their money This book is a reference text aimed at guiding consumers through the maze of AM The concept of the book is straightforward It has two main parts The first short section provides essential background on AM explaining in simple terms what is and what is not good reliable evidence and addressing other relevant issues like for instance the placebo response informed consent integrative medicine etc The second and main part consists of 150 short chapters topically grouped and each dedicated to one single alternative therapeutic or diagnostic method In each of them seven critical points are raised These points relate to issues that are important for consumers decisions whether it is worth trying the method in question Restricting the discussion to just seven points means that issues must be prioritized to those themes which are most relevant in the context of each given modality **The**

Nixon launched the War on Cancer with the signing of the National Cancer Act of 1971 and the allocation of billions of research dollars it was amidst a flurry of promises that a cure was within reach The research establishment was trumpeting the discovery of oncogenes the genes that supposedly cause cancer As soon as we identified them and treated cancer patients accordingly cancer would become a thing of the past Fifty years later it s clear that the War on Cancer has failed despite what the cancer industry wants us to believe New diagnoses have continued to climb one in three people in the

United States can now expect to battle cancer during their lifetime For the majority of common cancers the search for oncogenes has not changed the treatment We re still treating with the same old triad of removing surgery burning out radiation or poisoning chemotherapy In Cancer and the New Biology of Water Thomas Cowan MD argues that this failure was inevitable because the oncogene theory is incorrect or at least incomplete and based on a flawed concept of biology in which DNA controls our cellular function and therefore our health Instead Dr Cowan tells us the somatic mutations seen in cancer cells are the result of a cellular deterioration that has little to do with oncogenes DNA or even the nucleus The root cause is metabolic dysfunction that deteriorates the structured water that forms the basis of cytoplasmic health Despite mainstream medicine s failure to bring an end to suffering or deliver on its promises it remains illegal for physicians to prescribe anything other than the standard of care for their cancer patients despite the fact that gentler more effective and more promising treatments exist
