completely restructured and the night sky view would change greatly over the course of several hundred million years the direct effects on our planet would be few and infrequent with only a small probability of being truly catastrophic These issues will be explored along with the ideas that galaxies must reach a certain evolutionary maturity before they can even form solar systems and that there are habitable zones within galaxies Thus galaxy scale processes like collisions can determine the fate of life on Earth like planets

These topics seemed to be so interesting for the scientific community that more than 120 contributions were submitted Of these 94 were finally accepted and approximately 200 participants attended the 5 day meeting The symposium was organised in nine sessions covering the whole field Every main topic was introduced by a review lecture covering the state of the art The aim of the meeting was to assess the impact of the new X ray findings on the general astronomical knowled8e The discussion ranged from non degenerated stellar X ray sources and stellar coronae tL supernovae bursters globular clusters normal galaxies and finally to cosmology In each field the philosophy was to bring together the relevant information obtained in radio optical and X ray observations followed by theoretical discussions A large number of contributed papers were also presented within this framework
