

Gas Variables

How are the variables that describe a gas related?

Why?

Imagine buying a balloon bouquet at a party store. How will the helium gas in the bouquet behave if you carry it outside on a hot summer day? How will it behave if you carry it outside during a snowstorm? What happens if the balloons are made of latex, which can stretch? What happens if the balloons are made of Mylar[®], which cannot stretch? What if you add just a small amount of gas to each balloon? What if you add a lot of gas? In this activity, you will explore four variables that quantify gases—pressure (P), volume (V), temperature (T), and moles (n) of gas. These four variables can be related mathematically so that predictions about gas behavior can be made.

Model 1 – Gases in a Nonflexible Container

Experiment A (Adding more gas)

A1

Volume = 2 units

External pressure = 1 atm

Internal pressure = 1 atm

Temperature = 300 K

A2

Volume = 2 units

External pressure = 1 atm

Internal pressure = 2 atm

Temperature = 300 K

A3

Volume = 2 units

External pressure = 1 atm

Internal pressure = 3 atm

Temperature = 300 K

Experiment B (Heating the gas)

B1

Volume = 2 units

External pressure = 1 atm

Internal pressure = 1 atm

Temperature = 200 K

B2

Volume = 2 units

External pressure = 1 atm

Internal pressure = 2 atm

Temperature = 400 K

B3

Volume = 2 units

External pressure = 1 atm

Internal pressure = 3 atm

Temperature = 600 K

*Note: Volume in the model is not set in units, rather than liters, because 6 molecules of gas at the conditions given would fit into every small space ($1 = 10^{-21}$ m³). These particles themselves are much larger compared to the space between them than in a hydrogen atom.

Physical Chemistry for JEE Advanced: Part 1, 3E (Free Sample) K. S. Verma, 2022-05-19 Physical Chemistry for JEE Advanced Part 1 a Cengage Exam Crack Series product is designed to help aspiring engineers focus on the subject of physical chemistry from two standpoints To develop their caliber aptitude and attitude for the engineering field and profession To strengthen their grasp and understanding of the concepts of the subjects of study and their applicability at the grassroots level Each book in this series approaches the subject in a very conceptual and coherent manner While its illustrative solved examples facilitate easy mastering of the concepts and their applications an array of solved problems exposes the students to a variety of questions that they can expect in the examination The coverage and features of this series of books make it highly useful for all those preparing for JEE Main and Advanced and aspiring to become engineers

Unsupervised Learning Algorithms M. Emre Celebi, Kemal Aydin, 2016-04-29 This book summarizes the state of the art in unsupervised learning The contributors discuss how with the proliferation of massive amounts of unlabeled data unsupervised learning algorithms which can automatically discover interesting and useful patterns in such data have gained popularity among researchers and practitioners The authors outline how these algorithms have found numerous applications including pattern recognition market basket analysis web mining social network analysis information retrieval recommender systems market research intrusion detection and fraud detection They present how the difficulty of developing theoretically sound approaches that are amenable to objective evaluation have resulted in the proposal of numerous unsupervised learning algorithms over the past half century The intended audience includes researchers and practitioners who are increasingly using unsupervised learning algorithms to analyze their data Topics of interest include anomaly detection clustering feature extraction and applications of unsupervised learning Each chapter is contributed by a leading expert in the field **General**

Science Quick Starts Workbook Raham, 2019-01-02 The General Science Quick Starts workbook provides warm up activities that will exercise scientific investigation skills in six broad subject area categories matter and energy living things ecosystems and habitats astronomy and space sciences earth science materials and ancient life Skills covered in the quick start activities include observing asking about understanding figuring out doing stuff and finding out Each page features two to four quick starts that can be cut apart and used separately The entire page may also be used as a whole class or individual assignment The Quick Starts Series provides students in grades 4 through 8 with quick review activities in science math language arts and social studies The activities provide students with a quick start for the day s lesson and help students build and maintain a powerful domain specific vocabulary Each book is correlated to current state national and provincial standards Mark Twain Media Publishing Company specializes in providing engaging supplemental books and decorative resources to complement middle and upper grade classrooms Designed by leading educators this product line covers a range of subjects including mathematics sciences language arts social studies history government fine arts and character

Chemical Sensors Ghenadii Korotcenkov, 2012-07-15 Chemical sensors are integral to the automation of myriad industrial processes and everyday monitoring of such activities as public safety engine performance medical therapeutics and many more This 4 volume reference work covering simulation and modeling will serve as the perfect complement to Momentum Press's 6 volume reference works Chemical Sensors Fundamentals of Sensing Materials and Chemical Sensors Comprehensive Sensor Technologies which present detailed information related to materials technologies construction and application of various devices for chemical sensing This 4 volume comprehensive reference work analyzes approaches used for computer simulation and modeling in various fields of chemical sensing and discusses various phenomena important for chemical sensing such as bulk and surface diffusion adsorption surface reactions sintering conductivity mass transport interphase interactions etc In this work it will be shown that theoretical modeling and simulation of the processes being a basic for chemical sensors operation could provide considerable progress in choosing both optimal materials and optimal configurations of sensing elements for using in chemical sensors Each simulation and modeling volume in the present series reviews modeling principles and approaches peculiar to specific groups of materials and devices applied for chemical sensing Volume 2 Conductometric Type Sensors covers phenomenological modeling and computational design of conductometric chemical sensors based on nanostructured materials such as metal oxides carbon nanotubes and graphene This volume contains an overview of the approaches used to quantitatively evaluate characteristics of sensitive structures in which electric charge transport depends on the interaction between the surfaces of the structures and chemical compounds in the surrounding

Modeling, Analysis and Optimization of Process and Energy Systems F. Carl Knopf, 2011-12-14 Energy costs impact the profitability of virtually all industrial processes Stressing how plants use power and how that power is actually generated this book provides a clear and simple way to understand the energy usage in various processes as well as methods for optimizing these processes using practical hands on simulations and a unique approach that details solved problems utilizing actual plant data Invaluable information offers a complete energy saving approach essential for both the chemical and mechanical engineering curricula as well as for practicing engineers

Bioreaction Engineering K. Schügerl, K.-H. Bellgardt, 2012-12-06 The book is intended to present various examples for reactor and process modeling and control as well as for metabolic flux analysis and metabolic design at an advanced level In Part A General principles and techniques with regard to reactor and process models process control and metabolic flux analysis are presented In addition the accuracy precision and reliability of the measured data are discussed which are ex

tremely important for process modeling and control A virtual bioreactor system is presented as well which can be used for the training of students and operators of industrial plants and for the development of advanced automation tools In Part B the General principles are applied for particular bioreactor models It covers the application of the computational fluiddynamic CFD technique to stirred tank and bubble column bioreactors Different solution methods are presented the Reynolds averaging of the turbulent Navier Stokes equations and modeling of the Reynolds stresses with an appropriate turbulence k ee model and the Euler two fluid model as well as the Euler Langrange approaches *Advanced Turbulent Combustion Modeling for Gas Turbine Application* Andrea Donini, In spite of the increasing presence of renewable energy sources fossil fuels will remain the primary supply of the world s energy needs for the upcoming future Modern gas turbine based systems represent one of the most efficient large scale power generation technology currently available Alongside this gas turbine power plants operate with very low emissions have flexible operational characteristics and are able to utilize a broad range of fuels It is expected that gas turbine based plants will play an important role as an effective means of converting combustion energy in the future as well because of the vast potential energy savings The numerical approach to the design of complex systems such as gas turbines has gained a continuous growth of interest in the last few decades This because simulations are foreseen to provide a tremendous increase in the combustor efficiency fuel flexibility and quality over the next future In this dissertation an advanced turbulent combustion technique is implemented and progressively developed for the simulation of all the features that are typically observed in stationary gas turbine combustion including hydrogen as a fuel The developed turbulent combustion model retains most of the accuracy of a detailed simulation while drastically reducing its computational time As a result of this work the advancement of power generation plants can be accelerated paving the way for future developments of alternative fuel usage in a cleaner and more efficient combustion
