Gas Liquid Reactions:

Gas-liquid Reactions P. V. Danckwerts, 1970 **Microreactors for Gas/Liquid Reactions** Kristin Hecht, 2014-01-01

The widespread adoption of microreactors has been hindered by a lack of knowledge regarding rules and parameters needed for their design. This dissertation deals with the investigation of interfacial area and liquid mass transport in microreactors for gas liquid reactions. Observations of a reduction in conversion occurring when changing from a glass laboratory device to a stainless steel process device motivated investigations into the effect of material and surface properties on the gas liquid flow and reaction. This work takes a look inside the machined microstructures produced at the Institute for Micro Process Engineering of the Karlsruhe Institute of Technology and investigates the nature of the solid surfaces resulting from the machining process, the surface roughness and the contact angle of the resulting surface. The effect of wettability on gas liquid flow in microreactors has been investigated in capillaries of various materials. The absorption of carbon dioxide into aqueous solutions of sodium hydroxide has been used to investigate gas liquid flow and reaction in capillaries and in a microstructured falling film reactor. Under certain limiting assumptions depending upon the exact rates of reaction and transport, values of the interfacial area and liquid mass transport coefficient can be derived from measurements of reaction. This dissertation contributes a small step towards a better understanding of how measurements of the interfacial area and mass transfer coefficient can be performed, demonstrates why the effect of material wettability cannot be ignored and provides a stronger basis for further work in the development of general correlations describing microstructured gas liquid reactors. Chemical and Catalytic Reaction Engineering James J. Carberry, 2001-01-01. Designed to give chemical engineers background for managing chemical reactions, this text examines the behavior of chemical reactions and reactors, conservation equations for reactors, heterogeneous reactions, fluid fluid and fluid solid reaction systems, heterogeneous catalysis and catalytic kinetics, diffusion and heterogeneous catalysis, and analyses and design of heterogeneous reactors. 1976 edition.

Equipment for Gas-liquid Reactions Donald B. Keyes, 1929 **Gas-liquid Reactions** Peter Victor Danckwerts (Chemical engineer, Great Britain), 1970 *Studies in Gas-liquid Reactions Using High Temperature and Pressure* Alamjit Singh Dhaliwal, 1928 **Reaction Kinetics and Reactor Design, Second Edition** John B. Butt, 2000-01-03. This text combines a description of the origin and use of fundamental chemical kinetics through an assessment of realistic reactor problems with an expanded discussion of kinetics and its relation to chemical thermodynamics. It provides exercises, open ended situations, drawing on creative thinking and worked out examples. A solutions manual is also available to instructors.

Accelerating Gas-Liquid Reactions in Flow Suyong Han, 2022 Principles of Extractive Metallurgy Terkel Rosenqvist, 2004. Rather than simply describing the processes and reactions involved in metal extraction, this book concentrates on fundamental principles to give readers an understanding of the possibilities for future developments in this field. It includes a review of the basics of thermodynamics, kinetics, and engineering principles that have special importance.

for extractive metallurgy to ensure that readers have the background necessary for maximum achievement The various metallurgical unit processes such as roasting reduction smelting and electrolysis are illustrated by existing techniques for the extraction of the most common metals Each chapter includes a bibliography of recommended reading to aid in further study The appendices include tables and graphs of thermodynamic qualities for most substances of metallurgical importance these are ideal for calculating heat enthalpy balances and chemical equilibrium constants SI Units are used consistently throughout the text Gas-liquid Reactions Edwin Pieter van Elk, 2001
