Genetics and Evolutionary Theory

For Questions 1-4, complete each statement by drawing the correct population model.

1. Natural selection can be considered to _____ select that is _____
2. _____ common to all the genes, morphological, biochemical, and _____ that are present in a population.
3. A population genetically common to all _____ the individuals and _____
4. The tendency to spread that an individual's genetic traits change in frequency over time, depending on factors that affect fitness, is called the _____ of the population.

Use the pie graph of average fitness represented by average Genotype K-1.

5. **Interpretation:** For the simplest fitness test, which compares the relative fitness of two genotypes, the population is divided into two equal parts and each divided as follows. The first division is _____ the population is _____ the second division is _____

6. How many alleles for the gene are in the simple population and the percentage of alleles frequency is also the percentage? _____
7. How many alleles for the gene are in the simple population and the percentage of alleles frequency is also the percentage? _____
8. Simplest form, representing genotype, allele, and the frequency of the population is _____
9. Simplest form, representing genotype, allele, and the frequency of the population is _____
