If twice the radius is equal to the square of the radius, then the diameter is equal to the square of the radius. Draw a conclusion from the given information.

Merrill, 2012-12-06 The middle years of the nineteenth century saw two crucial developments in the history of modern logic George Boole's algebraic treatment of logic and Augustus De Morgan's formulation of the logic of relations The former episode has been studied extensively the latter hardly at all This is a pity for the most central feature of modern logic may well be its ability to handle relational inferences De Morgan was the first person to work out an extensive logic of relations and the purpose of this book is to study this attempt in detail Augustus De Morgan 1806-1871 was a British mathematician and logician who was Professor of Mathematics at the University of London now University College from 1828 to 1866 A prolific but not highly original mathematician De Morgan devoted much of his energies to the rather different field of logic In his *Formal Logic* 1847 and a series of papers On the Syllogism 1846-1862 he attempted with great ingenuity to reformulate and extend the traditional syllogism and to systematize modes of reasoning that lie outside its boundaries Chief among these is the logic of relations De Morgan's interest in relations culminated in his important memoir On the Syllogism IV and on the Logic of Relations read in 1860
