*Geometric And Algebraic Topological Methods In Quantum Mechanics* Luigi Mangiarotti,Gennadi A  
Sardanashvily,Giovanni Giachetta,2005-01-27 In the last decade the development of new ideas in quantum theory including  
geometric and deformation quantization the non Abelian Berry s geometric factor super and BRST symmetries non  
commutativity has called into play the geometric techniques based on the deep interplay between algebra differential  
geometry and topology The book aims at being a guide to advanced differential geometric and topological methods in  
quantum mechanics Their main peculiarity lies in the fact that geometry in quantum theory speaks mainly the algebraic  
language of rings modules sheaves and categories Geometry is by no means the primary scope of the book but it underlies  
many ideas in modern quantum physics and provides the most advanced schemes of quantization , **Geometric and  
Topological Methods for Quantum Field Theory** Sylvie Paycha,Bernardo Uribe,2007 This volume based on lectures and  
short communications at a summer school in Villa de Leyva Colombia July 2005 offers an introduction to some recent  
developments in several active topics at the interface between geometry topology and quantum field theory It is aimed at  
graduate students in physics or mathematics who might want insight in the following topics covered in five survey lectures  
Anomalies and noncommutative geometry Deformation quantisation and Poisson algebras Topological quantum field theory  
and orbifolds These lectures are followed by nine articles on various topics at the borderline of mathematics and physics  
ranging from quasicrystals to invariant instantons through black holes and involving a number of mathematical tools  
borrowed from geometry algebra and analysis *The Best Writing on Mathematics 2018* Mircea Pitici,2018-12-04 The year  
s finest mathematical writing from around the world This annual anthology brings together the year s finest mathematics  
writing from around the world Featuring promising new voices alongside some of the foremost names in the field The Best  
Writing on Mathematics 2018 makes available to a wide audience many pieces not easily found anywhere else and you don t  
need to be a mathematician to enjoy them These essays delve into the history philosophy teaching and everyday aspects of  
math offering surprising insights into its nature meaning and practice and taking readers behind the scenes of today s hottest  
mathematical debates James Grime shows how to build subtly mischievous dice for playing slightly unfair games and Michael  
Barany traces how our appreciation of the societal importance of mathematics has developed since World War II In other  
essays Francis Su extolls the inherent values of learning doing and sharing mathematics and Margaret Wertheim takes us on  
a mathematical exploration of the mind and the world with glimpses at science philosophy music art and even crocheting And  
there s much much more In addition to presenting the year s most memorable math writing this must have anthology  
includes an introduction by the editor and a bibliography of other notable pieces on mathematics This is a must read for
