will certainly prove an invaluable acquisition to the practicing statistician who finds other literature on analysis of discrete data hard to follow or heavily theoretical The Statistician In this revised and updated edition of their popular book David Hosmer and Stanley Lemeshow continue to provide an amazingly accessible introduction to the logistic regression model while incorporating advances of the last decade including a variety of software packages for the analysis of data sets Hosmer and Lemeshow extend the discussion from biostatistics and epidemiology to cutting edge applications in data mining and machine learning guiding readers step by step through the use of modeling techniques for dichotomous data in diverse fields Ample new topics and expanded discussions of existing material are accompanied by a wealth of real world examples with extensive data sets available over the Internet

Engineering Compendium on Radiation Shielding International Atomic Energy Agency, 2013-06-29 The need has arisen for a comprehensive handbook for engineers faced with problems of radiation shielding design Although there are several excellent books on shielding they either do not give enough consideration to the many practical design problems or are limited to special aspects of the subject Recognizing the universal need the International Atomic Energy Agency decided to sponsor the publication of the present Engineering Compendium on Radiation Shielding At the first editorial discussions it was agreed that if such a book were to be undertaken it would be appropriate not only to create a useful design tool for the practising engineer but also to include

well referenced basic data for the research worker Although trying to keep the book down to a reasonable size the editors have aimed at a complete presentation of the subject covering and linking both the technology and the science of shielding Efforts to make terms and definitions consistent throughout have been only partially successful owing to the continuing development of new ideas However inconsistencies that could not be eliminated are identified whenever possible
