

Step #1: Read the following passage and use your ROBUS strategies (read, circle, box, underline, and substitute).

The human body is a fascinating object – even a miracle of design and engineering! Just like an automobile, car, car, substituted (e.g., engine, car, population, car, car, car), the human body can also be divided into levels of organization. From largest to smallest, the levels of organization in the human body are organism, organ system, organ, tissue, and cell.

It all starts with the microscopic units of life called cells. These microscopic units are doing their job without you even knowing it. Through all daily posture functions that keep you alive, they all also have a specialized purpose, function, or job. Some cells send electrical signals to the brain and are called nerve cells. Others are also called neurons. Other cells carrying oxygen throughout the body and are called red blood cells.

A group of cells form a tissue, which work together to perform the same function in the body. Examples of tissues include muscle, epithelial, epithelial, and connective. Muscle tissues contract and relax and allow the body to move, but there are three types of tissues: cardiac (control heart), skeletal (control organs), and smooth (control bones). Epithelial tissues cover the surface of the body and the organs. One example is skin. Connective tissues connect all the parts of the body and provide support.

Groups of tissues form organs, which conduct a specific function. One example of an organ is the heart, which is made up of connective tissues, nerve tissues, and cardiac muscle tissues. Although the tissues in organs have specific jobs, they all work together to make the organ work.

A group of two or more organs that work together to perform a specific function are called an organ system. The human body has eleven organ systems and each of them have a specific job or role. The circulatory system helps you transport gases and nutrients throughout your body – it includes the blood, heart, and blood vessels. The respiratory system helps you breathe and exchange gases – it includes the nose, trachea, bronchi, and lungs. The excretory system helps you get rid of wastes, while the digestive system helps you digest food.

Step #2: Answer the following prompts.

1. In paragraph #1, what are the levels of organization in the human body? _____
2. In paragraph #2, what are the smallest units of life called? _____
3. All cells have a _____ function.
4. In paragraph #2, what do nerves send? _____
5. In paragraph #2, what type of cells carries oxygen? _____
6. In paragraph #2, what is a group of specialized cells called? _____
7. In paragraph #2, what examples of tissues are given? _____
8. In paragraph #2, what do cardiac muscle tissues control? _____
9. In paragraph #2, what type of muscles control organs? _____
10. In paragraph #2, what type of muscles controls the bones? _____
11. In paragraph #2, epithelial tissues _____
12. What is an example epithelial tissue? _____
13. In paragraph #2, what is a group of tissues? _____
14. In paragraph #2, what are two or more organs called? _____
15. How many organ systems are in the body? _____
16. What is the job of the excretory system? _____

Introduction To Body Structure Directed Reading
