CAFFEINE accomplishes its task by treeing function induction as a tree search problem. It constrains its tree search space via a canonical functional form grammar and searches the space with grammatically constrained genetic programming. The second designer task is topology selection topology design. Topology selection tools must consider a broad variety of topologies such that an appropriate topology is selected must easily adapt to new semiconductor process nodes and readily incorporate new topologies. Topology design tools must allow designers to creatively explore new topology ideas as rapidly as possible.
