

Notes

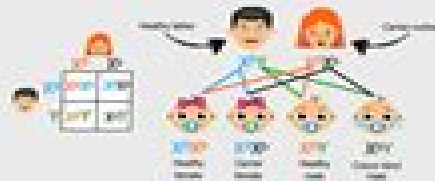

5.4 Pedigree Diagrams

- Pedigrees are genetic pedigree diagrams that show the inheritance of a trait in a group of related individuals
- The diagram below shows the inheritance of cystic fibrosis. The highlighted individuals suffer from the disease

5.5 Sex-Linked Traits

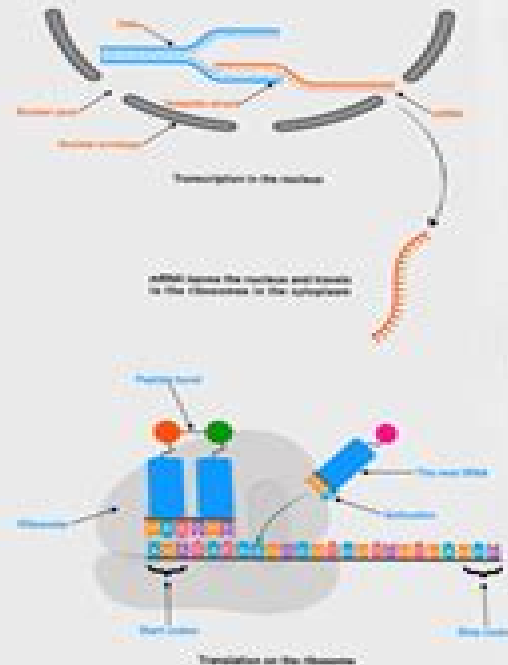

- It was first identified in the 19th century that sex-linked traits are found on a sex chromosome
- In humans, females have two X chromosomes (XX) while males have X and Y chromosomes (XY)
- Most X chromosomes carry **recessive** genes for the X, and therefore, it takes two genes
- Therefore, most sex-linked characteristics are found on the X chromosome
- Many of the X chromosomes can only have one allele of the sex-linked characteristic
- Males have a 50% chance of having recessive sex-linked disorders
- Red-green colour blindness in humans is an example of a recessive sex-linked disorder
- Only **males can be carriers** (heterozygous) of the type of disease
- Based on this, two healthy parents can have a son with red-green colour blindness if the mother is a carrier

5.6 Genetic Screening

- Genetic screening** the analysis of a person's DNA to check for the presence of any faulty allele
- Genetic screening programs must meet the following requirements to be successful:
 - 1. **Prevalence** (How often the trait occurs in the population)
 - 2. **Accuracy** (How often the test is correct)
 - 3. **Reliability** (How often the test is repeated)
 - 4. **Cost** (How much the test costs)
 - 5. **Privacy** (How the results are handled)
- Genetic screening can be done to adults, embryos in the uterus (blastocyst) or to embryos produced by IVF
- IVF is the process of fertilisation where an egg is fertilised with a sperm outside the body, in a test tube

PROTEIN SYNTHESIS SUMMARY

May 2012 Igcse Biology Edexcel Mark Scheme
