The 1940 Vrancea Earthquake. Issues, Insights and Lessons Learnt Radu Vacareanu, Constantin Ionescu, 2016-03-02 These proceedings include most of the available information on this major seismic event and its consequences With an estimated moment magnitude of 7.7 and a heavy toll in terms of human and economic losses it ranks as the largest intermediate depth earthquake in Europe in the twentieth century Nevertheless because of the difficult conditions in the 1940s the lessons learnt after the Vrancea earthquake were not extensively shared with the international scientific community and thus this book fills a gap in the literature discussing the knowledge acquired after major disasters Past experience together with current understanding of the 1940 Vrancea earthquake are presented along with the latest information on Romanian seismicity seismic hazard and risk assessment and seismic evaluation and rehabilitation of buildings and structures Moreover it includes excerpts from Romanian post disaster reports and textbooks concerning the earthquake

Advances in Structural Integrity and Failure, 2024-02-21 The purpose of this book is to expand the knowledge and skills of civil and structural engineers and researchers and help them better understand design and analyze civil engineering applications This book examines advancements in structural integrity and failure and underground construction It offers profound insights into the

mechanisms that can lead to the integrity or failure of structures and result in safe underground construction. It provides details on the fundamental principles, theories, behavior, and performance of different structural elements and underground construction. The book delves into the mechanics, design, and construction of reinforced concrete structures. It explores the design principles applied to reinforced concrete structures and considers critical structural elements like beams, slabs, columns, and foundations. It also demonstrates various advances in reinforced concrete technology, including high performance concrete, fiber reinforced concrete, self-compacting concrete, and the use of nanomaterials. It describes methods for the analysis and evaluation of reinforced concrete structures, non-destructive testing methods, structural health monitoring, finite element analysis, and causes of failure. In addition, the book proposes a design model for determining the flexural bearing capacity of reinforced concrete beams having reinforcement steel with reduced modulus of elasticity. Moreover, the book investigates the effects of loading rates on the mechanical properties of structural steel. It also evaluates the formation of welding defects in the process of connecting steel structures, which is inevitable from the aspect of failure mechanics. In addition, it utilizes an equivalent shell wire model to propose a simple, accurate technique for nonlinear assessment of reinforced concrete shear walls with less computational cost. The book introduces tunnel design theory and method, support structure systems, construction technology, and equipment under complex geological conditions. Furthermore, it highlights procedures to design efficient dewatering systems, considering the working conditions, stability, and impacts generated in the vicinity of construction, and to examine the state of retaining walls by using hydrogeological tools. Finally, it outlines the online monitoring and intelligent diagnosis mechanism of key equipment in the subway ventilation system.

Energy and Seismic Renovation Strategies for Sustainable Cities Giuseppe Margani, 2019-06-11. The principle of sustainability should be strictly connected with safety, since both aim to conserve resources. In the case of sustainability, the resources are typically thought of as environmental, while in the case of safety, the resources are basically human. In spite of this common ground, discussions on sustainability usually give insufficient attention to safety. In the last years, the EU has

made large investments to increase the energy efficiency of the existing building stock paving the way for a low carbon future however less effort has been made to enhance its seismic resilience Therefore the safety and consequently the sustainability of towns situated in earthquake prone countries remain inadequate In such countries energy renovation actions should be combined with seismic retrofitting However a number of barriers considerably limit the real possibility of extensively undertaking combined retrofit actions especially for multi owner housing and high rise buildings These barriers are of different kinds technical e g unfeasibility and or ineffectiveness of conventional retrofit solutions financial e g high renovation costs insufficient incentives subsidies organizational e g occupants disruption and relocation renovation consensus by condominium ownerships and cultural social insufficient information and skills lack of adequate policy measures for promoting renovation actions This book aims to overcome these barriers and to bridge the gap between sustainability and safety so to conserve both human and environmental resources Structural Analysis and Design to
