**Finsler Geometry** Xinyue Cheng, Zhongmin Shen, 2013-01-29 Finsler Geometry An Approach via Randers Spaces exclusively deals with a special class of Finsler metrics Randers metrics which are defined as the sum of a Riemannian metric and a 1 form Randers metrics derive from the research on General Relativity Theory and have been applied in many areas of the natural sciences They can also be naturally deduced as the solution of the Zermelo navigation problem The book provides readers not only with essential findings on Randers metrics but also the core ideas and methods which are useful in Finsler geometry It will be of significant interest to researchers and practitioners working in Finsler geometry even in differential geometry or related natural fields Xinyue Cheng is a Professor at the School of Mathematics and Statistics of Chongqing University of Technology China Zhongmin Shen is a Professor at the Department of Mathematical Sciences of Indiana University Purdue University USA

**The Geometry of Ordinary Variational Equations** Olga Krupkova, 2006-11-14 The book provides a comprehensive theory of ODE which come as Euler Lagrange equations from generally higher order Lagrangians Emphasis is laid on applying methods from differential geometry fibered manifolds and their jet prolongations and global analysis distributions and exterior differential systems Lagrangian and Hamiltonian dynamics Hamilton Jacobi theory etc for any Lagrangian system of any order are presented The key idea to build up these theories as related with the class of equivalent Lagrangians distinguishes this book from other texts on higher order mechanics The reader should be familiar with elements of differential geometry global analysis and the calculus of variations

**Buildings** Kenneth S. Brown, 2013-06-29 For years I have heard about buildings and their applications to group theory I finally decided to try to learn something about the subject by teaching a graduate course on it at Cornell University in Spring 1987 This book is based on the notes from that course The course started from scratch and proceeded at a leisurely pace The book therefore does not get very far Indeed the definition of the term building doesn't even appear until Chapter IV My hope however is that the book gets far enough to enable the reader to tackle the literature on buildings some of which can seem very forbidding Most of the results in this book are due to J Tits who originated the theory of buildings The main exceptions are Chapter I which presents some classical material Chapter VI which presents joint work of F Bruhat and Tits and Chapter VII which surveys some applications due to various people It has been a pleasure studying Tits's work I only hope my exposition does it justice
