Using this Manual

This manual provides advice for both the Basic and Intermediate Awards

Advice without
marked borders
is for Basic &
Intermediate
Awards

OPPOSITE

It is important to gain consent before assisting the patient (see Section 1.2). The initial assessment should be completed by requesting as much of the patient as is necessary in the circumstances to facilitate full access to the examination. To obtain the patient's dignity, it is often better to undertake a supervised examination through the clothing while awaiting a fuller examination in the privacy of the ambulance. Clinical observations, when with consent in place, will demonstrate deficiencies due to fractures or evidence of bleeding.

It also important to recognise the effect that the environment can have on the patient, particularly if it is cold, raining, noisy and wet. The provider should seek to minimise the effect of the environment on the patient, for example, by keeping the patient protected from the elements.

Remember to repeat the primary survey regularly.

Award

FRAGILE

The advice offered in this section relates to a multiple casualty situation but does not extend to involvement in a formal major incident declared by one or more of the emergency services.

The word fragile, derived from the French verb 'to hurt'. The purpose of fragile in the emergency care situation is to provide the early needs of patients in patient situations where the emergency medical resources are low.

The result of this briefing process is that the most

serious cases before those with less serious or

having established that the or

severe cases are

numbers

VENTILATION SUPPORT (BAG-VALVE-MASK)

(Note: for providers, this is a two-man technique)

Effective cooperation of the rescuer by inflation and removal of carbon dioxide by automatic or fully controlled through a good valve, rhythm and depth of breathing. By using a reservoir an airway seal pressure between 12 and 20 litres per minute with sufficient volume to make the chest rise.

In some patients lying on the ground, the rescuer does not often move it to the abdominal muscles that are doing the work. The adequacy of air flow of breathing results to be further supported by feeling for airflow from the mouth, as there could be insufficient volume flowing resulting in ineffective ventilation.

When a patient fails to breathe, or is not breathing

and/or the lungs, it may be necessary to

• mouth-to-mouth (see section

• pocket mask (see section

• BVM
