The Use and Storage of Methyl Isocyanate (MIC) at Bayer CropScience National Research Council,Division on Earth and Life Studies,Board on Chemical Sciences and Technology,Committee on Inherently Safer Chemical Processes: The Use of Methyl Isocyanate (MIC) at Bayer CropScience,2012-08-31

The use of hazardous chemicals such as methyl isocyanate can be a significant concern to the residents of communities adjacent to chemical facilities but is often an integral part of the chemical manufacturing process In order to ensure that chemical manufacturing takes place in a manner that is safe for workers members of the local community and the environment the philosophy of inherently safer processing can be used to identify opportunities to eliminate or reduce the hazards associated with chemical processing However the concepts of inherently safer process analysis have not yet been adopted in all chemical manufacturing plants

The Use and Storage of Methyl Isocyanate MIC at Bayer CropScience presents a possible framework to help plant managers choose between alternative processing options considering factors such as environmental impact and product yield as well as safety to develop a chemical manufacturing system In 2008 an explosion at the Bayer CropScience chemical production plant in Institute West Virginia resulted in the deaths of two employees a fire within the production unit and extensive damage to nearby structures The accident drew renewed attention to the fact that the Bayer facility manufactured and stores methyl isocyanate or MIC a volatile highly toxic chemical used in the production of carbamate pesticides and the agent responsible for thousands of death in Bhopal India in 1984 In the Institute accident debris from the blast hit the shield surrounding a MIC storage tank and although the container was not damaged an investigation by the U S Chemical Safety and Hazard Investigation Board found that the debris could have struck a relief valve vent pipe and cause the release of MIC to the atmosphere The Board s investigation also highlighted a number of weaknesses in the Bayer facility s emergency response systems In light of these concerns the Board requested the National Research Council convene a committee of independent experts to write a report that examines the use and storage of MIC at the Bayer facility

The Use and Storage of Methyl Isocyanate MIC at Bayer CropScience also evaluates the analyses on alternative production methods for MIC and carbamate pesticides preformed by Bayer and the previous owners of the facility

Lithium-Ion Cells Yuri Koshtyal ,Alexander Rumyantsev,2024-12-24

A large quantity of articles and books have been published on the designated topics However most of the literary sources describe the results of scientific articles on the synthesis and study of perspective materials reveal circuit and design solutions for constructing control systems and manufacturing batteries and are educational materials At the same time a small part of the published sources includes the following descriptions of materials produced industrially and used in the LIC manufacturing process demonstrations of the industrially produced LIC energy and power parameters analysis of the characteristics of manufactured miniature lithium ion cells solid state LICs lithium metal cells and all solid

state cells as well as others. Considering the popularity of the discussed topics one can hope to find detailed information on the Internet. Indeed, modern search engines make it possible to locate a sufficiently large number of relevant documents. However, while conducting such research we encountered the following challenges: the data are somewhat fragmented and their systematization and structuring are required; search results do not always meet search queries. For instance, data that were relevant to the topic were found but they did not match the query as accumulated data grow, the search time for new information extends, the choice of search engine and location, different countries affect search results, the data are not indexed in search engines although the correct keywords and website were requested, the information disappears due to website updates and the found data require additional processing. For example, many presentations show changes in the shape of the discharge curves depending on the discharge current strength. In addition, however, Ragone plots are necessary for a correct comparison and therefore the mathematical processing of presented results is required. Thus, this book was written to systematize and structure information on industrially produced materials for LIC manufacturing and industrially produced and promising LICs and lithium metal rechargeable cells for various applications.

Governing for transformation towards sustainable small-scale fisheries Food and Agriculture Organization of the United Nations, Berkes, F. (ed.), Franz, N. (ed.), 2025-02-21. This volume provides a human-centered perspective building on the expanding horizon from biological and economic management to interdisciplinary and transdisciplinary aquatic resources governance. It was prepared in celebration of the tenth anniversary of the Voluntary Guidelines for Securing Sustainable Small Scale Fisheries in the Context of Food Security and Poverty Eradication (SSF Guidelines). It also provides an update of

Berkes book *Coasts for People: Interdisciplinary Approaches to Coastal and Marine Resource Management* Routledge 2015. The original chapters of the book served as the first draft of seven of the chapters, all of them rewritten with multiple authors, total of 20 co-authors, and with an explicit focus on small scale fisheries through the lens of the SSF Guidelines. Over the years aquatic resources governance has evolved. For example, the term resource, which carried a sense of free goods and commodification of nature, shifted in meaning to include biodiversity and ecosystem services. The term management changed to include participation, complexity and uncertainty. The volume focuses on several subject areas as the key elements of an interdisciplinary science of aquatic governance. These include holism and ecosystems view. Chapter 2: coupled humans and environment systems; Chapter 3: fishers knowledge; Chapter 4: commons dilemmas; Chapter 5: co-management; Chapter 6: livelihoods and sustainability; Chapter 7: fishery systems resilience; Chapter 8: ecosystem and human rights based management; Chapter 9: These interdisciplinary social science oriented approaches have shaped recent thinking about small scale fisheries, helping empower fishers and fishworkers towards a more inclusive, equitable, sustainable and resilient subsector. They also help meet Sustainable Development Goals, particularly SDG1 No Poverty and SDG2 Zero Hunger, consistent with the emphasis of SSF Guidelines on poverty eradication and food security. The intended audience for the volume is broad based and includes fisheries and aquatic management practitioners and policymakers, scientists and educators. It is an invitation to a new generation of resource managers to be aware of how approaches and concepts have evolved over time to embrace the challenge of interdisciplinarity and complexity to advance the transformation towards sustainable small scale fisheries.
