Craun, Nancy Hearne, 2019-01-15 The continued lack of access to adequate amounts of safe drinking water is one of the primary causes of infant morbidity and mortality worldwide and a serious situation which governments international agencies and private organizations are striving to alleviate Barriers to providing safe drinking water for rural areas and small communities that must be overcome include the financing and stability of small systems their operation and appropriate cost effective technologies to treat and deliver water to consumers While we know how to technically produce safe drinking water we are not always able to achieve sustainable safe water supplies for small systems in developed and

developing countries Everyone wants to move rapidly to reach the goal of universal safe drinking water because safe water is the most fundamental essential element for personal and social health and welfare Without safe water and a safe environment sustained personal economic and cultural development is impossible Often small rural systems are the last in the opportunity line Safe Drinking Water in Small Systems describes feasible technologies operating procedures management and financing opportunities to alleviate problems faced by small water systems in both developed and developing countries In addition to widely used traditional technologies this reference presents emerging technologies and non traditional approaches to water treatment management sources of energy and the delivery of safe water

Typology of Farm Households and Irrigation Systems Hiroyuki Takeshima, Hyacinth Edeh, 2013-04-25 Irrigation is considered an important factor for agriculture and food security Knowledge gaps however still exist with regard to how farmers in Africa south of Sahara including Nigeria are using irrigation Given the diverse agroecological and socioeconomic environment in countries like Nigeria understanding the diverse patterns of irrigation use and their associations with household characteristics is important in designing how irrigation can contribute to the agricultural transformation This report summarizes the typology of farm households and irrigators in Nigeria We apply a cluster analysis method to the Living Standard Measurement Survey LSMS Integrated Survey on Agriculture data and various secondary data We also compare the costs and inputs used across different irrigation crops as reported in Nigeria Findings indicate that the three major irrigation systems in Nigeria are 1 labor intensive diverted stream irrigation of rice 2 supplementary irrigation of coarse grains and legumes using groundwater and 3 dry season irrigation of vegetables Each crop is irrigated during a specific season and using a specific water source and irrigation system Farmers choice of irrigation system tends to depend on many factors For example in the South tractorization is often a necessary precondition for rice irrigation In the North intensive irrigation of rice and vegetables may make sense only if labor is cheap whereas irrigation of sorghum and legumes is supplementary and may not affect farm households behaviors Although more rigorous studies are needed in the future observed patterns of irrigation use in Nigeria indicate that the policies aiming to raise agricultural productivity and to develop the value chains of key crops may need to be based on an understanding of why irrigation is used in specific ways in different systems and of what the key constraints in scaling up such systems in other locations are

Manual Well Drilling Investment Opportunity in Ethiopia Elizabeth Weight, Robert Yoder, Andrew Keller, 2013-10-09 Increasing female and male farmers access to groundwater can contribute to

increased incomes improved food security and improved access to water for livestock and domestic needs In many contexts private sector manual well drilling is a reliable and affordable means to access shallow groundwater but it is not widely available in Ethiopia Data information and mapping on pilot manual well drilling efforts in selected areas of Ethiopia indicated that the technique provided affordable access to shallow groundwater for farmers and demonstrated high demand among farmers for manually drilled wells as well as profitability for drilling businesses The authors of this paper suggest that investments in creating a spatial database of hydrogeologic suitability domains investments in driller training and associated investments in accelerating the drilling industry could catalyze a manual well drilling industry and significantly improve smallholder farmers affordable access to shallow groundwater

Mislevy,Jiangang Hao,2022-01-01 This book defines and describes a new discipline named computational psychometrics from the perspective of new methodologies for handling complex data from digital learning and assessment The editors and the contributing authors discuss how new technology drastically increases the possibilities for the design and administration of learning and assessment systems and how doing so significantly increases

the variety velocity and volume of the resulting data Then they introduce methods and strategies to address the new challenges ranging from evidence identification and data modeling to the assessment and prediction of learners performance in complex settings as in collaborative tasks game simulation based tasks and multimodal learning and assessment tasks Computational psychometrics has thus been defined as a blend of theory based psychometrics and data driven approaches from machine learning artificial intelligence and data science All these together provide a better methodological framework for analysing complex data from digital learning and assessments The term computational has been widely adopted by many other areas as with computational statistics computational linguistics and computational economics In those contexts computational has a meaning similar to the one proposed in this book a data driven and algorithm focused perspective on foundations and theoretical approaches established previously now extended and when necessary reconceived This interdisciplinarity is already a proven success in many disciplines from personalized medicine that uses computational statistics to personalized learning that uses well computational psychometrics We expect that this volume will be of interest not just within but beyond the psychometric community In this volume experts in psychometrics machine learning artificial intelligence data science and natural language processing illustrate their work showing how the interdisciplinary expertise of each researcher blends into a coherent methodological framework to deal with complex data from complex virtual interfaces In the chapters focusing on methodologies the authors use real data examples to demonstrate how to implement the new methods in practice The corresponding programming codes in R and Python have been included as snippets in the book and are also available in fuller form in the GitHub code repository that accompanies the book
